

## Task 12

### Translate this paragraph

The Internet is a system architecture that has revolutionized communications and methods of commerce by allowing various computer networks around the world to interconnect. Sometimes referred to as a “network of networks,” the Internet emerged in the United States in the 1970s but did not become visible to the general public until the early 1990s. By the beginning of the 21st century approximately 360 million people, or roughly 6 percent of the world's population, were estimated to have access to the Internet.

## Task 13

Decide whether the following statements are true or false

→ An electronic mailbox can get, save and manage the incoming messages.

→ An e-mail gives only a possibility to send text documents to other users.

→ The Internet connects personal computers within a very limited area.

→ The Internet is a powerful means of information interchange.

→ Data can only be sent to one individual user at one time.

→ The Internet and the Web are two different words for one and the same thing.

## Task 14
